

Odd Organism Challenge

This assignment can be as challenging as you want but you'll get extra points for extra effort. This is how it'll work. You need to find out the taxonomic "breakdown" of an organism....any organism. That's Kingdom through species and each taxon in between. Find an interesting fact about that organism that no one else in class uses and you'll earn some bonus points. If no one else uses that organism, you'll get even more points.

The basics: (do this at least)

Kingdom: _____

Common Name: _____

Phylum: _____

A sketch would be cool:

Class: _____

Order: _____

Family: _____

Genus: _____

Species: _____

The Gravy: (Can you say "extra credit? Get off yer butt)

Make sure the above is odd enough so that no one else will choose it. Start with favorite animals and go from there. Remember...google can be your friend.

ALSO: Tell us something interesting about that organism (where it lives, what it eats, what diseases it causes, etc.) You will need to share in class. TO be sure write your facts down here.
