Mr. Ulrich/Mrs. Ryan
Biology

Name:……..
Partner(s):……...

Alive!

As a class, we have listed some different types of organisms. Our task now is to see if we can come up with a list of processes ALL living things go through.

1. Define the term *organism*?

With your partner(s), enumerate as many things all of the organisms on the board have in common. Things to think about: What are the organisms made of? How do they get the materials they need to make more of themselves? Where do the individual organisms come from? How do they change throughout their lives?

Make your list here:
